PHASE 1 TIMELINE

10–12 Weeks
to Premium Launch

Three things most agencies miss *in this brief.*

We read your brief fully — all 17 sections. What stood out isn't what's easy to build. It's what's easy to get wrong. These are the decisions that look minor at Phase 1 and become expensive to reverse later.

O1

THE UKRAINIAN STORY ISN'T "ABOUT US" COPY

Most agencies will write a paragraph and bury it. The Poltava founder connection and the BISCHOFITE origin are the emotional spine of the entire brand. Every scroll section, every transition, every typographic pause on the homepage should quietly reinforce that this mineral came from somewhere real, discovered by someone with a personal reason to care about it.

O2

PHASE 1 HAS TO FEEL COMPLETE — NOT "COMING SOON"

You explicitly said Phase 1 should not be a tiny temporary website. We agree. The homepage needs to feel like a digital flagship for a fully formed luxury brand — even with product placeholders. That means cinematic motion, editorial pacing, real brand atmosphere. Visitors should feel the world of BISCH™, not a holding page waiting for products.

03

THE CMS AND COMMERCE ARCHITECTURE MUST BE RIGHT FROM DAY ONE

If Phase 1 is built on a template or a disconnected stack, Phase 2 commerce expansion becomes a rebuild, not an expansion. The headless Shopify + Next.js + CMS architecture needs to be established in Phase 1 — even if only the storytelling pages are live. Bolting commerce onto a Phase 1 that wasn't designed for it is where luxury brand projects silently fall apart.

04

RESTRAINT IS HARDER THAN EFFECTS

You used the phrase "luxury restraint" in the brief. That's not a design preference — it's a technical constraint. The team executing this needs to know when NOT to add motion, when whitespace outperforms a visual, and when a single well-placed editorial image does more than a 3D element. We treat restraint as the discipline, not the absence of craft.

"BISCH™ is not just a website project. It is the beginning of a luxury mineral wellness ecosystem." — We read that. It changes how we scope, design, and build everything from line one.

WHO WE ARE

A boutique digital agency built *for exactly this.*

Gcube Info is a boutique digital agency founded by serial entrepreneurs and technologists with one belief: that a powerful digital experience can transform a brand from a product into a world. We build end-to-end — design, frontend, backend, motion, and commerce — in-house, with no subcontracting.

50+

PROJECTS DELIVERED

40+

IN-HOUSE TECHNOLOGISTS

8+

YEARS IN OPERATION

10+

COUNTRIES SERVED

The same team that scopes this project is the team that builds and ships it. You will always know who you're talking to — no handoffs, no surprises, no subcontractors inheriting your brand mid-project.

SELECTED WORK

Luxury, wellness & *headless commerce* — built.

The projects below are the ones closest to what BISCH™ needs — premium brand experience, Headless Shopify, editorial storytelling, and ecommerce built to grow. Each is a live, working product.

FASHION & LIFESTYLE —
HEADLESS SHOPIFY

LESTRANGE London ↗

Editorial brand commerce. Calm, minimal, product-first storytelling.

LIFESTYLE SERVICES — PREMIUM
UX

Neat Method ↗

Refined lifestyle brand with editorial layout and immersive service pages.

PREMIUM ECOMMERCE — SHOPIFY

SITKA Gear ↗

Performance-first ecommerce with strong brand narrative and product storytelling.

WELLNESS & GROOMING —
SHOPIFY

Golden Grooming ↗

Wellness brand ecommerce with refined product presentation and ritual storytelling.

WELLNESS ECOMMERCE —
SHOPIFY

Detroit Grooming ↗

Premium grooming brand with editorial product pages and scalable commerce architecture.

BEAUTY & WELLNESS — SHOPIFY

Rosephoria ↗

Beauty brand with emotional storytelling, premium UI, and Shopify commerce foundation.

WELLNESS BRAND — HEADLESS
SHOPIFY

Puretropicx

Clean wellness brand with ingredient-led storytelling and mobile-first premium experience.

LIFESTYLE ECOMMERCE —
SHOPIFY

Nuzzie

Premium lifestyle product brand with immersive scroll experience and clean Shopify build.

CUSTOM WEB — ENTERPRISE

Street Solutions UK

Large-scale custom web platform with enterprise architecture and CMS integration.

SAAS PLATFORM — REACT /
NEXT.JS

GetBusy

Modern SaaS with Next.js, clean design system, scalable frontend architecture.

The stack — and *why each choice.*

Every technology choice in this proposal is defensible by this specific project — not a default we ship across every client. BISCH™ requires a frontend that feels cinematic, a commerce layer that scales without rebuilding, and a content system that can grow with the brand.

FRONTEND React / Next.js Performance, scalability, and the control required for premium motion and editorial layouts. SSR/SSG for fast initial load even on complex animated pages. The right foundation for a headless luxury build.	COMMERCE Headless Shopify Full custom frontend control without sacrificing Shopify's commerce reliability. Collections, checkout, inventory, subscriptions — all available for Phase 2 without touching Phase 1 design. Full Storefront API integration.
CONTENT Headless CMS Sanity or Contentful — depending on editorial complexity. Journal posts, ingredient pages, ritual guides, collection stories — all manageable without developer involvement. Structured for the full Phase 2 page architecture.	MOTION GSAP + Framer Motion GSAP for scroll-driven storytelling and cinematic section reveals. Framer Motion for component-level transitions. Both performance-optimised for mobile — animation is conditionally loaded to protect load speed.

3D / IMMERSIVE

React Three Fiber

WebGL-powered mineral sphere or crystalline object for the hero section. Scroll-reactive, GPU-accelerated, mobile-aware. Used precisely where the brief requests a 3D visual anchor — not applied decoratively across the site.

DESIGN SYSTEM

Figma + Tokens

Full design system with typography scale, spacing system, color tokens, motion guidelines, and component library. Delivered alongside the build so the BISCH™ team can manage and evolve the visual language independently.

What Phase 1 *ships* — and what it *scaffolds*.

Phase 1 is not a placeholder. It is a premium digital foundation that makes BISCH™ look and feel like an established luxury brand before a single product ships. Everything built in Phase 1 is designed so Phase 2 expands, not rebuilds.

SHIPS IN PHASE 1

- Immersive homepage with cinematic hero — scroll-driven mineral origin reveal, 3D visual anchor, refined brand statement
- Ukrainian heritage & founder story section — emotionally integrated, not buried in "About Us"
- BISCHOFITE mineral storytelling — ancient origin, geological depth, purity narrative, educational language
- New Zealand & Japan collection preview — atmospheric, mood-led, future product direction visualised
- Ritual wellness philosophy section — scalp, bath, body wellness positioning
- Product placeholder system — refined abstract product silhouettes before final photography
- Journal / editorial entry point — CMS-powered, ready for first content immediately
- Partnership & contact page — labs, distributors, investors, press
- Newsletter / early access CTA — email capture with premium design
- Mobile-first execution — premium experience on phone, not just desktop
- Full design system delivery — typography, tokens, spacing, motion guidelines
- Source code & CMS access — full ownership from day one

SCAFFOLDED FOR PHASE 2

- Headless Shopify commerce layer — API surface, collections, checkout-ready architecture
- Full product page templates — ritual story, ingredients, usage, photography, purchase path
- Collection pages — New Zealand, Japan, Scalp Ritual, Body Wellness
- Ingredient education pages — BISCHOFITE detail, botanicals, formulation philosophy
- Ritual guide templates — scalp ritual, bath ritual, body wellness, recovery
- Subscription & loyalty infrastructure
- Advanced 3D expansion — interactive product storytelling, cinematic collection pages
- Full journal & editorial expansion — mineral education, founder updates, heritage stories
- International commerce — multi-currency, international shipping, global checkout

SCHEDULE

10–12 weeks to a *premium Phase 1 launch*.

Weeks assume kickoff within two weeks of agreement. Dates aren't aspirational — they're based on how we've scoped comparable luxury brand and headless commerce builds. Weekly demos every Friday so you always see real progress, not status updates.

WEEKS 1–2

Discovery, Design Direction & Architecture

Brand immersion session with the BISCH™ team. Visual direction presentation — typography, color, motion language, spatial composition. Technical architecture finalised — Next.js + Headless Shopify + CMS stack confirmed. Figma design system foundations established.

WEEKS 3–5

Homepage Design — Full Fidelity

Complete homepage design in Figma across all breakpoints. Hero concept, mineral origin reveal, collection preview, ritual section, editorial entry point, CTA. Motion and interaction annotations. Client review and approval before any development begins.

WEEKS 6–8

Frontend Development + Motion Build

Next.js development. GSAP scroll-driven animations. React Three Fiber mineral element. CMS integration for journal and content sections. Headless Shopify API scaffolding. Fully responsive mobile-first build. Internal demo at end of week 8.

WEEKS 9–10

Inner Pages, CMS + Secondary Flows

About / founder page. Mineral heritage page. Partnership & contact page. Journal landing. Newsletter flow. CMS training for the BISCH™ team. Full content integration with your supplied brand copy and visuals.

WEEKS 11–12

QA, Performance, Optimisation & Launch

Cross-device QA. Performance audit — animation optimisation, Core Web Vitals, mobile load speed. Final content polish. Staging review with BISCH™ team. DNS, hosting, and launch. Handover: source code, CMS access, design files, documentation.

Where luxury brand projects *usually* slip.

We've shipped enough premium brand and headless commerce builds to know the recurring failure modes. None of these are dealbreakers — they're the ones worth naming early rather than discovering mid-project.

RISK	WHY IT TYPICALLY DERAILS	OUR MITIGATION
Motion performance on mobile	Heavy WebGL or GSAP animations that feel premium on desktop create lag and battery drain on mobile — damaging the exact experience the brief prioritises.	All animation is conditionally loaded. Mobile receives optimised motion variants, not stripped versions. Performance reviewed at end of Week 8, before launch.
Phase 1 feeling like a holding page	Without final product photography, many Phase 1 luxury builds feel incomplete — undermining credibility with press, partners, and investors before products launch.	Refined product placeholder system built into the design from the start. Abstract mineral-inspired silhouettes and atmospheric product direction make placeholders feel intentional, not absent.
CMS that doesn't scale	An underpowered CMS chosen for Phase 1 cost savings creates content migration headaches when Phase 2 editorial and product pages are needed.	CMS architecture is scoped for the full Phase 2 page structure from day one. Adding content types in Phase 2 is configuration, not rebuilding.
Headless Shopify underscoped in Phase 1	Headless Shopify API surface isn't scaffolded in Phase 1, Phase 2 commerce requires significant frontend rework — slowing the product launch window.	Storefront API is wired in Phase 1 even if the commerce pages aren't live. Collections, product schema, and checkout routing are ready before products exist.

RISK	WHY IT TYPICALLY DERAILS	OUR MITIGATION
Scope expansion post-launch	Features agreed as Phase 2 get pulled into Phase 1 under pressure — Phase 1 launch slips, and Phase 2 loses its clean starting point.	Phase 2 features live in a dedicated tracked backlog from Week 1. Change requests are surfaced in weekly demos with scope impact noted clearly.

Things we'd decide *together* — not for you.

A few open items we'd want answered in the first call. We'd rather raise these in writing than discover them in Week 3.

Q01 Visual Assets & Photography Status

Do you have existing brand photography, product imagery, or geological/mineral visuals — or does Phase 1 rely entirely on placeholder design? This affects the homepage art direction significantly. We can design beautifully either way — we just need to know the starting point.

Q02 Logo & Visual Identity Refinement

The brief states that logo direction already exists. Would you like the Phase 1 design to work within the existing logo system as-is, or is light refinement part of the scope? Affects Week 1–2 design system scope.

Q03 3D / WebGL Ambition for Phase 1

The brief references a mineral-inspired 3D element as a possibility. We'd like to explore two directions — one with a React Three Fiber mineral sphere in the hero, one without — and show you both before committing. Which direction excites you more as a starting point?

Q04 Validation Stage

Your brief mentions openness to a smaller proof-of-capability before the full project. We're fully open to this — a 2–3 week validation sprint delivering the homepage design concept, motion direction, and one interactive section prototype before full commitment. Would this be useful for you?

Q05 **Hosting & Infrastructure Preference**

Do you have an existing hosting preference — Vercel, AWS, Netlify — or is this open? Affects the deployment architecture recommendation and estimated monthly infrastructure cost we'd include in the full proposal.

How we *actually* work — four non-negotiables.

What working with Gcube Info looks like in practice. These aren't aspirational values — they're operational defaults we've held since 2017.

01

NDA + Contract First

Both signed before any detailed creative discussion. Full IP ownership stays with BISCH™ from day one — no shared rights, no licensing carve-outs, no claims. Source files, design system, CMS access, and codebase are yours on delivery.

02

In-House. No Subcontracting.

The team that scopes this project is the team that designs, develops, and ships it. You'll always know exactly who is working on BISCH™. No handoffs to contractors. No offshore handovers mid-project.

03

Weekly Demos — Not Status Emails

Every Friday: a working build or Figma progress, what changed, what's next. You see the product as it develops — not a summary of what we're planning. If something is off, you catch it in Week 3, not Week 10.

04

Honest Scope Conversations

We don't pad estimates to cover unknowns. If we don't know something, we say so and price the discovery — not the assumption. Change requests are tracked and surfaced clearly, with scope impact shown before any decision is made.

NEXT STEP

A short call is the easiest way forward.

We've laid out what we noticed in your brief, what we'd build, and how we'd build it. The fastest way to know whether we're the right fit is a focused 20-minute call. We'll walk you through relevant live work, answer anything specific to BISCH™, and — if it makes sense — propose a small validation sprint before full commitment.
